

KIRF Target 4 - I know doubles and halves of numbers to 20.

Look around at home or outside for things that you can double or half! Practise with weighing scales, cubes or counters! Sharing games are also useful for this skill!

When halving, having physical objects that can be put into two groups can make this easier.

How can my parents help at home?

Doubling and halving is an important skill which will support them with their maths learning later on in the curriculum. The aim is for them to know these by heart, not have to 'work it out'. They should be able to double all numbers up to 20, and half all even numbers up to 40. Practising little and often is a good way to learn these skills. 5 minutes per day is more effective than an hour once a week.

There will be activities related to this key fact uploaded onto your Google classroom page. These will include worksheets and websites. Try doing some of these at home.

Vocabulary

What is double 4?

Can you find half of 16?

What do you need to double to make 20?
