## Fluency Progression Policy - July 2022

Fluency in maths is about developing number sense and being able to use the most appropriate method for the task at hand; to be able to apply a skill to multiple contexts.
The National Curriculum states that pupils should become fluent in the fundamentals of mathematics through varied and frequent practice. While a part of this is about knowing key mathematical facts and recalling them efficiently, fluency means so much more than this as it allows pupils to delve much deeper. In order to become fluent in these skills, pupils need to be revisiting and practising them regularly.

## Weekly Maths Facts

Each week, weekly maths facts will be posted onto the Google Classroom Page for your year group. This will consist of 5 key facts to be practised that week (similar to spellings).
At the start of the half term, an overview of the facts for each week is to be sent home in paper form and stuck into reading records.
Five new facts will be introduced each week, with the previous 3 weeks being tested weekly to a total of 15 facts. Tests will happen on a Monday and scores recorded. When testing, it is important to note that we are testing for quick recall. This means you should be limiting how long you give children to work out answers (only a few seconds), and you should not allow the use of concrete apparatus for support. You should also avoid asking questions in the order that they were given and should mix up the order that you test them in.
The vast majority of your class will be working on the same class facts, however you may find it more appropriate to use an adjusted list for some of your less able pupils who have gaps in their fluency skills.

## In Class Fluency

In class, a ten minute daily slot is to be timetabled in (outside of your maths lesson) where the 5 key facts of that week are to be practised. This could be in the form of a game or puzzle. At times, you may also want to revisit facts from earlier weeks.
